

## PurYield™

### Controlled-Release Fertilizers for Agriculture

Developed with Pursell’s unique next-generation nutrient delivery technology, **PurYield™** controlled-release fertilizers meter out nutrients at a predictable rate synchronized with the uptake needs of the plant.

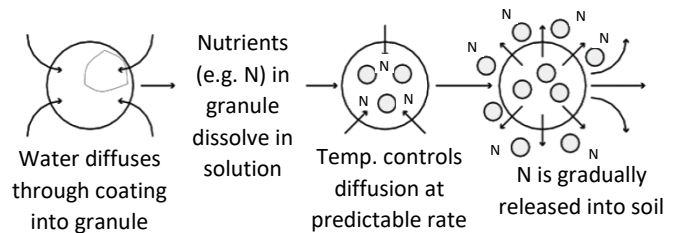

The result: **Improved nutrient use efficiency** and **minimized nutrient loss**, translating to a **well-nourished crop** with **less waste** in a **healthier ecosystem**.

**PurYield™** controlled-release fertilizers allow for the inclusion of micronutrients and temperature-sensitive additives, such as biologicals, growth enhancers, and soil health promoters.

#### How it works

(using a granular urea substrate as an example)

Talk to your Agrico Canada rep to see how **PurYield™** can help you **protect your fertilizer investment**, **reduce application costs**, and **optimize crop performance** while **supporting 4R nutrient stewardship**.
